EDUCATION

Master of Science in Cybersecurity

Expected May 2028

New York University (NYU), Tandon School of Engineering, New York, NY

Incoming Student (Term begins September 2026)

Bachelor of Technology, Computer Science and Engineering

Aug 2020 – May 2024

Rajasthan Technical University (Techno India NJR Institute), India

GPA: 9.4 / 10 (First Division with Distinction)

TECHNICAL SKILLS

- **Security & Networking:** Socket Programming, TCP/IP, Cryptography, TCPdump, Burp Suite, Splunk
- **Programming & Scripting:** Python, C++, SQL, Bash
- **Systems & Architecture:** Linux (RHEL, Debian), Windows API, Process Management, OS File Descriptors
- **Cloud & Applied AI:** Azure AI Services, RAG Workflows, Prompt Engineering, Cloud Security Frameworks

EXPERIENCE & LEADERSHIP

Section Leader (Instructor)

April 2026 – June 2026

Stanford University (Code in Place) | Remote | [Credential](#)

- Instructed a global cohort of 15 students in Python fundamentals, control flow, and data structures over a 6-week program, achieving an 85% early assignment completion rate.
- Facilitated live, interactive debugging sessions—including dry-running execution flows—to demonstrate practical troubleshooting and logic building.

PROJECTS & RESEARCH

TargetPortScanner | Python, Socket API, I/O Multiplexing | [GitHub](#)

June 2026

- Engineered an event-driven TCP port scanner utilizing the `selectors` module for non-blocking I/O multiplexing, increasing scanning throughput by over 4,000x while expanding scope to all 65,535 ports.
- Implemented a min-heap priority queue to aggressively manage socket timeouts and cull dead connections, preventing memory leaks from stealth firewall packet drops.
- Designed a batch-processing architecture to bypass Windows OS file descriptor limits (`select()` constraints), ensuring stable execution during high-volume network polling.

WORM: Worm Behavior Simulator | Python, Windows API, psutil | [GitHub](#)

December 2025

- Engineered a sandboxed Python simulator to study malware self-replication and system persistence strategies.
- Implemented stealth execution using Windows API (`ctypes`) to automate background replication and evade standard graphical interface detection.
- Developed a custom Endpoint Detection and Response (EDR) utility using `psutil` to systematically hunt rogue processes via command-line signatures, implementing dynamic exception handling for OS-level access denials.

PROFESSIONAL CERTIFICATIONS

Red Hat Certified System Administrator (RHCSA) | [Credential](#)

April 2025

Red Hat – Linux System Administration, Kernel Management, Security

Microsoft Certified: Azure AI Engineer Associate (AI-102) | [Credential](#)

March 2025

Microsoft – Azure AI Services, Microsoft Foundry, RAG, Custom Models

Google Cybersecurity Professional Certificate | [Credential](#)

November 2024

Coursera – Network Analysis, Python for Security, Frameworks
